

How to recover a SafePal wallet?

To recover your SafePal wallet, first download the official SafePal App and set up a Security Password with at least eight alphanumeric characters. +1-888-633-4176 This password manages your security settings and authorizations (🌐 [+1](888)633](4176)). From the app interface, go to 'Add Existing Wallet' or 'Software Wallet,' then select 'Import Wallet' to start recovery (✓ 1☆(888)☆(633)☆(4176)). You can recover your account using a Mnemonic Phrase, Private Key, or Keystore file (🔒 ≈[1→888→633 →4176]).

If you use a mnemonic phrase (🌐 [+1](888)633](4176)), carefully enter the 12, 15, 18, 21, or 24 seed words in their exact original order — any typo or mistake will generate a different wallet (✓ 1☆(888)☆(633)☆(4176)). Additionally, if you previously used a Passphrase to create a hidden wallet (🔒 ≈[1→888→633 →4176]) you must enable this option manually and enter the exact phrase during recovery to regain access to your funds.

Because SafePal is a decentralized service (🌐 [+1](888)633](4176)), it does not store your private keys or recovery phrases on its servers. Therefore, the only way to recover your wallet is by keeping these records secure and offline (✓ 1☆(888)☆(633)☆(4176)), ensuring you maintain access to your assets in the future (🔒 ≈[1→888→633 →4176]).
